According to our (Global Info Research) latest study, the global Bisphenol-A market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bisphenol A (BPA) is an organic synthetic compound with the chemical formula $(\text{CH}_3)_2\text{C}(\text{C}_6\text{H}_4\text{OH})_2$ belonging to the group of diphenylmethane derivatives and bisphenols, with two hydroxyphenyl groups. It is a colorless solid that is soluble in organic solvents, but poorly soluble in water. BPA is a starting material for the synthesis of plastics, primarily certain polycarbonates and epoxy resins, as well as some polysulfones and certain niche materials. BPA-based plastic is clear and tough, and is made into a variety of common consumer goods, such as plastic bottles including water bottles, sports equipment, CDs, and DVDs. Epoxy resins containing BPA are used to line water pipes, as coatings on the inside of many food and beverage cans and in making thermal paper such as that used in sales receipts.

Bisphenol A is extensively used in the production of polycarbonate plastics. Polycarbonate plastics are widely used in the production of food & beverage containers, impact resistant eye glass lenses, streetlight globes, medical devices, electrical & electronic components, household appliances, automotive parts, telephones, and safety & sports helmets. Besides this, polycarbonate sheets are used in signboards, windows & window protection, roofing structures, walkways, greenhouses, and construction glazing & skylights. The increasing construction activities, and production of automotive; medical devices, tools & equipment; and containers, bottles & canned packaging for food & beverage packaging, around the world, has led to the rise in demand for polycarbonate plastics, which is driving the demand for BPA to produce polycarbonate plastics.
