Abstracts

The global Bisphenol A market size is expected to reach \$ 15158 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Bisphenol A (BPA, CAS 80-05-7) is a major bulk organic chemical intermediate, typically produced by the condensation of phenol and acetone under acidic catalytic conditions. It is generally supplied as white flakes, prills, granules or crystalline solids. BPA is primarily used as a key building block for polycarbonate (PC) and epoxy resins. In 2025, Global Bisphenol A sales is estimated at 10,100 Kilotons, with an average ex-works price of around 1,060 US\$/Ton.

The Bisphenol A value chain starts from benzene, propylene, cumene, phenol and acetone; Bisphenol-A is then produced through phenol-acetone condensation and mainly consumed in polycarbonate and epoxy resins, which are further used in electrical and electronics, automotive, construction, anti-corrosion coatings, copper-clad laminates, adhesives and composites.

The Bisphenol A market is mainly driven by two downstream demand pillars: polycarbonate and epoxy resins. PC remains difficult to replace in electric vehicles, automotive lighting, charging infrastructure, electrical and electronic housings, optical materials, medical components and home-appliance structural parts due to its transparency, impact resistance, heat resistance and dimensional stability. Epoxy resin demand is also expanding in wind turbine blades, electronic encapsulation, copper-clad laminates, anti-corrosion coatings, industrial adhesives and composites.

This report studies the global Bisphenol A production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Bisphenol A and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Bisphenol A that contribute to its increasing demand across many markets.
