According to our (Global Info Research) latest study, the global Bisphenol A(BPA)-Free Thermal Paper market size was valued at US\$ 1920 million in 2024 and is forecast to a readjusted size of USD 2531 million by 2031 with a CAGR of 4.1% during review period.

Bisphenol A, also known as BPA is a synthetic chemical that has been used for many industrial purposes. Ever since its discovery by a Russian chemist in 1891, BPA began to gain some popularity due to its ability to serve as a vital compound for most materials that are still widely used up to this day. Some notable examples include plastic bottles, sports equipment, water pipe linings, beverage cans, and of course, thermal papers that are usually used for sales receipts.

However, the application of BPA on various products started to raise some concerns regarding the chemical's health risk issues over the past decades. Recent studies showed that traces of BPA could permeate through almost anything that it could come in contact with. Too much exposure to BPA can bring adverse effects to the body specifically the brain and hormone production.

Luckily enough, some companies that manufacture products with BPA have found some ways to limit or even eliminate the use of such potentially harmful chemicals. For instance, thermal paper mills started to undergo some modifications so that they won't be needing any BPA to serve their purpose. These developments eventually bore positive results with the emergence of BPA-free thermal paper rolls.

Global key players of bisphenol A(BPA)-free thermal paper include Oji Paper, Koehler, Hansol Paper, Mitsubishi Paper, Appvion, etc. Global top five manufacturers hold a

share over 60%. The key players are mainly located in Europe, the U.S., China, Japan, and South Korea. In terms of product, no top coating is the largest segment, with a share over 78%. And in terms of application, the largest application is POS applications, with a share over 54%, followed by self-adhesive labels and plotting and recording.
