Abstracts

The global Bisphenol F Diglycidyl Ether market size is expected to reach \$ 2713 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

In 2025, global Bisphenol F Diglycidyl Ether output reached about 600,000 tons and global capacity of around 700,000 tons. The average price is about USD 3,000 per ton, with gross margins near 28%. Bisphenol F Diglycidyl Ether is a low-viscosity epoxy resin produced by reacting bisphenol F with epichlorohydrin under alkaline conditions, followed by purification to obtain a high-purity diglycidyl ether with excellent mechanical strength, chemical resistance, electrical insulation, low shrinkage, and superior penetration properties compared with conventional bisphenol A epoxy resins. It is widely used as a base resin or reactive diluent in high-performance coatings, structural adhesives, electrical and electronic encapsulation, composite materials, civil engineering, aerospace, automotive, marine, wind energy, and industrial flooring applications. The supply chain begins with upstream suppliers of phenol, formaldehyde, bisphenol F, epichlorohydrin, sodium hydroxide, catalysts, solvents, and specialty additives, followed by midstream manufacturers that synthesize, refine, formulate, and package BFDGE into various epoxy resin grades tailored for different performance requirements. Downstream customers include coating manufacturers, adhesive formulators, composite producers, electronics and semiconductor manufacturers, automotive and aerospace component suppliers, wind turbine blade manufacturers, construction material companies, marine equipment producers, and industrial maintenance and protective coating providers.
