## **Abstracts**

Bit error rate testers are usually designed for testing radio telemetry systems, synchronous serial communication equipment, and communication links. The high rate of penetration of broadband communication and sharp rise in demand of the access lines are driving the need of communication links with high transmission capacity and very low bit error rate. When some data is transmitted over a particular communication channel, there is a probability of errors being arrived into the system. BER tester identifies the error frequency and bit error rate (BER) over a communication channel for evaluating its overall performance, thereby improving the communication link quality and enabling network system to incorporate complete link characteristics.

### **SCOPE OF THE REPORT:**

This report focuses on the Bit Error Rate Testers (BERT) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Emergence of more multi-functional and modular bit error rate testers is expected to significantly drive market growth over the forecast period. Technological advancements paired with rapid development in communications sector is anticipated to drive the need to manufacture enhanced testing equipment which may also fuel market growth. The increasing demand for digital interfaces coupled with innovations in technologies and data rates may also contribute significantly to the global bit error rate testers market growth. Deployment of networks having frame rates of 40 Gigabit and 100 Gigabit are also expected to impel market growth over the next few years. Factors such as increasing video traffic over the internet as a result of video conferencing, You Tube, high definition IPTV and enterprise migration from private networks towards internet-

based VPNs are estimated to propel market demand over the coming years.
