Abstracts

The global BK7 Glass Lens market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

BK7 glass lens is an optical lens made of BK7 glass material. BK7 is a common borosilicate glass composed of sodium borate ($\text{Na}_2\text{O B}_2\text{O}_3$) and sodium silicate ($\text{Na}_2\text{O SiO}_2$). BK7 glass lenses have excellent optical properties and are suitable for a wide range of optical applications. It has a high refractive index (about 1.516) and low dispersion properties, which can effectively focus and adjust the direction of light propagation. In addition, the BK7 glass lens has high light transmission and can transmit light in the visible range. BK7 glass lenses are commonly used in optical instruments, photographic lenses, microscopes, telescopes, laser systems, optical fiber communication equipment and other fields. Its optical properties make it suitable for applications requiring precise optical imaging, focusing and light control.
