## Abstracts

Black Anodized Aluminum is a type of color anodizing in which the surface of anodized aluminum is colored black with a dye.

Anodized aluminum is aluminum that has undergone anodizing, during which an oxide film forms on the surface through electrolysis on an anode. It is more resistant to corrosion than untreated aluminum.

The luster can be altered through various processing methods before and after anodizing. Different types of anodized aluminum, such as matte black anodized aluminum and glossy black anodized aluminum, are available to match the specific requirements of the product, including function and decorative appearance.
