## Abstracts

The global Black Charcoal Mask market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Black charcoal masks are usually made of ingredients such as charcoal, gypsum and plant extracts. These ingredients have adsorption properties and can absorb dirt and oil on the skin surface to achieve the effect of cleansing the skin. At the same time, these ingredients can also promote the continuous renewal of the necrotic stratum corneum on the skin surface to achieve a deep cleansing effect.

In addition, the black charcoal mask also has antioxidant, anti-aging, skin whitening and other effects. Its antioxidant effect can resist free radical damage and reduce skin aging, dark yellow and other problems. Its anti-aging effect can promote the metabolism of skin cells, increase skin elasticity, and reduce the appearance of fine lines and wrinkles. Its skin whitening effect can inhibit the formation of melanin and make the skin whiter.

These driving forces make black charcoal masks a popular skin care product that can effectively improve skin condition and make skin healthier.

Black charcoal mask is a new type of skin care product, usually composed of charcoal, gypsum and plant extracts. Its main function is to improve skin condition and make skin healthier.
