According to our (Global Info Research) latest study, the global Black Fused Alumina market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Black Fused Alumina, also known as Black Corundum, is a specialized abrasive material produced by smelting bauxite and iron oxide in an electric arc furnace. It is created by fusing and crystallizing a mixture of high-quality bauxite and iron oxide at high temperatures. Black Fused Alumina possesses excellent hardness, toughness, and high temperature resistance. It has a deep black color due to the presence of iron oxide impurities. This abrasive material is commonly used in applications such as polishing, grinding, and surface preparation, especially for non-ferrous metals, stainless steel, and various hard materials.

The industry trend of Black Fused Alumina is driven by the demand for abrasives suitable for specific metalworking and surface preparation applications. As industries such as automotive, aerospace, and machinery seek high-quality finishing and surface treatment, the use of Black Fused Alumina is increasing.
