According to our (Global Info Research) latest study, the global Black Lithium Tantalate Wafers market size was valued at US\$ 66.5 million in 2025 and is forecast to a readjusted size of US\$ 149 million by 2032 with a CAGR of 12.4% during review period.

Free hot black LiTaO₃ wafers were prepared by chemical reduction method in a mixed atmosphere of CO₂ and H₂. The pyroelectric effect of the black LiTaO₃ wafer was basically eliminated, and the transmittance was significantly reduced. The reduction process did not change the Curie temperature and piezoelectric properties of the LT wafer, and the charge could be neutralized even when a potential occurred instantaneously. Lithium tantalate (LiTaO₃) prepared using reduction technology has a high ability to neutralize charges even when a potential occurs instantaneously. The piezoelectric performance of black lithium tantalate chips is not significantly different from that of standard chips. Therefore, black reduced lithium tantalate chips are widely used in the production of high-frequency SAW devices.
