Abstracts

The global Black Treacle market size is expected to reach \$ 2984 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Black treacle is a dark, viscous sugar syrup derived from the later stages of sugar refining, characterized by its high mineral content, robust flavor, and strong caramelized bitterness. In 2025, the average global selling price is approximately US\$1,450 per metric ton, with global sales volume and production both estimated at around 1.28 million metric tons. The industry typically maintains a gross margin range of 18%-35%, supported by value-added food applications, consistent demand from baking and confectionery sectors, and stable industrial by-product supply from sugar refining. The supply chain includes upstream raw materials such as sugarcane or sugar beet, processing chemicals, and energy; midstream producers focus on controlled crystallization, concentration, filtration, and quality standardization; downstream users include bakery manufacturers, confectionery producers, beverage companies, flavor houses, and foodservice operators.

In 2025, the black treacle market remains stable with moderate growth driven by traditional baking demand, premium confectionery recipes, and increasing interest in natural sweeteners with distinctive flavor profiles. While it is often considered a niche ingredient compared with refined sugars, black treacle benefits from its functional properties such as moisture retention, color enhancement, and flavor depth. Demand is relatively inelastic, tied closely to heritage food products and industrial formulations. Price volatility is mainly influenced by sugar raw material cycles rather than end-market competition, resulting in a comparatively predictable market structure.

This report studies the global Black Treacle production, demand, key manufacturers, and key regions.
