## Abstracts

According to our (Global Info Research) latest study, the global Blackhead Derivation Instrument market size was valued at US\$ 463 million in 2025 and is forecast to a readjusted size of US\$ 770 million by 2032 with a CAGR of 7.7% during review period.

In 2025, global blackhead removal devices production reached approximately 108 million units.

A blackhead removal device is a beauty care device used for pore cleansing, blackhead extraction, and skin care treatments. It primarily utilizes technologies such as vacuum suction, microcrystalline exfoliation, water-oxygen circulation, or ultrasonic vibration to remove blackheads, excess oil, dead skin cells, and impurities from the skin surface and pores, thereby improving clogged pores, oil buildup, and rough skin texture. The device is typically equipped with a suction adjustment system, multifunctional treatment heads, and skin protection components, allowing the cleansing intensity to be adjusted according to different skin types and treatment needs. This helps enhance cleansing effectiveness while minimizing skin irritation. It is widely used in beauty salons, skin management centers, medical aesthetic clinics, and home beauty care applications. With increasing consumer demand for skin cleansing and refined skincare treatments, modern blackhead removal devices are gradually evolving toward greater intelligence, multifunctionality, and gentler skincare solutions. New-generation devices commonly feature more precise suction control, intelligent sensing systems, and multi-mode treatment technologies to improve blackhead removal efficiency while reducing skin damage. At the same time, products integrated with hot and cold therapy, blue light therapy, hydration infusion, and digital skin analysis functions are becoming increasingly popular, further expanding the application of blackhead removal devices in pore

management, oily skin care, and comprehensive skin cleansing treatments.

Driven by the growing demand for skin cleansing, pore management and household beauty care, the blackhead remover device market has maintained steady development in recent years. As a basic beauty care equipment, blackhead removers are widely used in beauty salons, skin management centers, medical beauty institutions and personal home skin care scenarios. They can be applied to blackhead removal, grease absorption, keratin care, pore dredging and skin texture improvement. With consumers paying increasing attention to convenient, mild and refined skin care, the market demand for products with stable suction power, adjustable gears, multi-functional probes and excellent safety protection performance keeps rising. Meanwhile, equipment technologies are being upgraded toward intelligent suction control, hot and cold therapy, blue light care, moisturizing introduction and portable design, further expanding the mid-to-high-end blackhead remover market. In the future, the blackhead remover market will still enjoy stable growth potential, while industrial competition will be increasingly focused on cleaning effect, use safety, skin compatibility, product durability, easy operation and brand service capability.
