A blade commutator is a device used to change the direction of current in a DC motor or DC generator. It usually consists of a set of movable brush blades that can be inserted into different brush holder slots to change the connection between the power supply and the motor windings and achieve the change of current direction. Insert-type commutators are often used in applications that require frequent changes in the direction of motor operation, such as mixers, elevators and other equipment. By changing the insertion position of the brush blade, the forward and reverse rotation of the motor can be controlled, which is flexible and convenient.
