Abstracts

The global Blended Cooking Oil market size is expected to reach \$ 22748 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032). Blended Cooking Oil (or edible vegetable blended oil) is an edible oil made by mixing two or more refined vegetable oils in scientifically determined proportions. The goal is to achieve a balanced fatty acid composition, providing more balanced nutrition and better performance for various cooking methods (such as stir-frying, pan-frying, and deep-frying). Its upstream industry is the cultivation of oil crops, including the production of various oilseeds such as soybeans, rapeseed, peanuts, and sunflower seeds. The oilseeds are processed through pressing or extraction to obtain crude oil, which is then refined and blended according to scientific formulas to produce blended oil products with different formulations and nutritional functions. Global sales are projected to exceed 17 million tons in 2025, with an average market price of approximately US\$993 per ton. The industry's gross profit margin ranges from 3% to 15%.

The sustained vitality of the blended edible oil market is primarily driven by evolving public health awareness and the demand for supply chain resilience in the face of extreme weather events. On the one hand, in the post-pandemic era, consumers' pursuit of 'eating good oils and healthy oils' has fueled the surge in premium blended oils containing olive oil, flaxseed oil, or camellia oil, leading to a structural increase in product unit prices. On the other hand, due to frequent global climate fluctuations and geopolitical conflicts causing significant price volatility in single types of oilseeds (such as sunflower oil and rapeseed oil), blended oils, with their interchangeable ingredients, have become a core means for companies to balance cost pressures and ensure stable supply.

This report studies the global Blended Cooking Oil production, demand, key manufacturers, and key regions.
