According to our (Global Info Research) latest study, the global Blind Spot Information System (BLIS) market size was valued at USD 6393.9 million in 2023 and is forecast to a readjusted size of USD 13040 million by 2030 with a CAGR of 10.7% during review period.

Blind Spot Information System (BLIS) system is a sensor based detection system implemented in automobiles that is used for monitoring vehicles at the rear and side of the driver/vehicle. Such systems generate tactile, audible, vibrating or visual form of warnings.

Growing consumer desire for improved safety features has led to a surge in demand for blind spot information systems. The demand for these systems is expected to increase during the forecast period due to the increasing number of traffic accidents globally. Rising disposable income and changing consumer preferences for purchasing vehicles with BLIS rather than wide rearview mirrors have increased the demand for BLIS technology. The combination of blind spot technology and ADAS technology is becoming more and more popular among consumers because the system automatically avoids obstacles. BLIS works with RADAR technology to keep vehicles in the same lane and prevent them from drifting out of the lane. Additionally, sales of vehicles equipped with such features due to consumer preference are expected to drive market growth.
