Abstracts

According to our (Global Info Research) latest study, the global Blind Spot LiDAR market size was valued at US\$ 545 million in 2025 and is forecast to a readjusted size of US\$ 1463 million by 2032 with a CAGR of 14.9% during review period.

In 2025, global Blind Spot LiDAR production reached approximately 2,120 K Units, with an average global market price of around 250 US\$/Unit.

Blind Spot LiDAR is a specialized automotive-grade sensor dedicated to detecting vehicle blind spot areas, such as the sides and rear corners that cameras and standard long-range LiDARs cannot effectively cover. It uses laser detection and ranging technology to generate high-precision short-to-medium range 3D point clouds, identifying nearby vehicles, pedestrians, cyclists, and obstacles in real time. Designed with a wide field of view and high angular resolution, it provides reliable environmental perception for blind spot monitoring, lane change assist, parallel parking, and low-speed maneuvering, significantly improving driving safety by eliminating visual and sensing blind spots.

Demand for Blind Spot LiDAR is driven by the continuous upgrading of automotive safety regulations and ADAS functions, as effective blind spot detection has become a key requirement for high-level assisted driving systems. Its compact size, low cost, and dedicated perception capability make it an indispensable complementary sensor to long-range LiDAR and cameras, providing safety redundancy for lane change, merging, reversing, and urban low-speed driving. With the rapid popularization of L2+ and above intelligent driving systems, the installation rate of blind spot sensors is rising rapidly, expanding from high-end models to mainstream passenger cars and commercial

vehicles. Business opportunities focus on the development of highly integrated, miniaturized, and low-cost module solutions, the optimization of blind-spot detection algorithms for complex urban scenes, and the expansion of applications in commercial vehicles, intelligent logistics vehicles, and mobile robots, bringing stable and sustained growth to the industry.
