The blind spot monitoring lens is an optical lens used to detect blind spots around the vehicle and improve driving safety. According to the results I searched, the main functions of the blind spot monitoring lens are as follows: through cameras or radars installed on the front and rear sides of the vehicle, it captures images or signals around the vehicle in real time, and reminds the driver through the display screen or sound and light prompts Pay attention to obstacles or other vehicles in the blind spot to avoid collisions. By analyzing the image in front of the vehicle, it calculates the distance and relative speed to obstacles, and provides alarm prompts or automatic braking to reduce accidents. It works collaboratively with other sensors such as radar and lidar to achieve accurate identification and positioning of the surrounding environment, achieving safe, efficient and comfortable autonomous driving.
