Abstracts

The global Blister Machine market size is expected to reach \$ 4947 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032). Blister machine is a kind of equipment capable of manufacturing pre-formed packaging, which can be used to seal food, medicine and various consumer products. Blister packaging machines seal products in a cavity, usually with a paper backing or aluminum or film seal. These blister packs can be used for just about any product, but are common packages for small consumer goods, foods and pharmaceuticals. Most blister packaging machines use heat and pressure via a die to form the cavity or pocket from a roll or sheet of plastic.

The blister machine market is primarily driven by the steady expansion of the pharmaceutical industry and sustained demand for solid dosage forms, particularly as population aging and the prevalence of chronic diseases continue to increase global consumption of tablets and capsules. At the same time, stricter regulatory requirements for drug safety, traceability, and anti-tampering are accelerating the replacement and upgrading of pharmaceutical packaging equipment. In addition, the growth of pharmaceutical manufacturing capacity in emerging markets, expansion of generic drug production, and rising demand for automated, high-speed, and flexible packaging solutions are further supporting investment in blister machines.

At present, the blister machines' production is concentrated on China, Europe, Japan and Korea. Key players include Uhlmann, IMA, Hoonga, CKD Corporation, Marchesini and etc. Among all the companies, the Uhlmann has the highest revenue, with more than 5% of the market share. The blister machines can be divided in three types, being used widely in pharmaceutical, food, cosmetics and electronic industries.
