According to our (Global Info Research) latest study, the global Blister Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Blister machine is a kind of equipment capable of manufacturing pre-formed packaging, which can be used to seal food, medicine and various consumer products. Blister packaging machines seal products in a cavity, usually with a paper backing or aluminum or film seal. These blister packs can be used for just about any product, but are common packages for small consumer goods, foods and pharmaceuticals. Most blister packaging machines use heat and pressure via a die to form the cavity or pocket from a roll or sheet of plastic.

At present, the blister machines' production is concentrated on China, Europe, Japan and Korea. Key players include Uhlmann, IMA, Hoonga, CKD Corporation, Marchesini and etc. Among all the companies, the Uhlmann has the highest revenue, with more than 5% of the market share. The blister machines can be divided in three types, being used widely in pharmaceutical, food, cosmetics and electronic industries.
