According to our (Global Info Research) latest study, the global Block Trowel market size was valued at US\$ 38.85 million in 2025 and is forecast to a readjusted size of US\$ 54.39 million by 2032 with a CAGR of 5.0% during review period.

A block trowel, a tool for piling materials like bricks, is essential in plastering. It typically has an isosceles triangle shape for efficient and even spreading of mortar. The trowel's long, thin end is ideal for applying mortar in block holes, while its side is useful for kneading mortar, scooping it onto the trowel plate, and cleaning off excess mortar from stacked blocks.

Hold the block trowel similarly to a brick trowel, with a light grip and a small space between the handle and your palm. When stacking blocks, knead the mortar on the trowel plate, then scoop and spread it evenly across the block's width. Tilt the trowel during application for proper placement. After use, thoroughly clean and dry the trowel.
