Abstracts

According to our (Global Info Research) latest study, the global Blockchain Logistics Solutions market size was valued at US\$ 3695 million in 2025 and is forecast to a readjusted size of US\$ 7042 million by 2032 with a CAGR of 9.5% during review period.

Blockchain Logistics Solutions refer to software platforms or integrated services that apply the distributed ledger, immutable records, smart contracts, digital identities, electronic documents, and multi-party collaboration mechanisms of blockchain to logistics, supply chain, cross-border trade, warehousing, transportation, traceability, and settlement. Their core value is not to 'replace traditional logistics systems,' but rather to provide cargo owners, carriers, warehouses, ports, customs, financial institutions, and end customers with trusted data sharing, cargo tracking, electronic bills of lading/waybill management, traceability for cold chain and high-value goods, anomaly liability determination, and automated settlement capabilities. It's important to note that the industry has moved from early 'consortium blockchain platform proof-of-concept' to more practical application scenarios, such as food/pharmaceutical traceability, cross-border documentation, carbon footprint recording, supply chain finance, and digital product passports.

Early attempts to establish global blockchain logistics platforms have been made, but commercialization has proven difficult. For example, Maersk and IBM have announced the discontinuation of their TradeLens platforms, illustrating the challenges of a single platform covering a multi-party global logistics ecosystem. Future growth is more likely to come from vertical applications such as food cold chain, pharmaceutical traceability, port electronic documentation, cross-border trade compliance, and supply chain finance. The main value of blockchain in logistics lies in transparency, traceability, data

immutability, and multi-party sharing. Deloitte also points out that blockchain can be used to improve supply chain transparency and traceability, and reduce some administrative costs. The value of a standalone blockchain system is limited; it is being integrated with IoT sensors, temperature and humidity monitoring, RFID, GPS, electronic bills of lading, AI risk control, and ERP/TMS/WMS systems to form a closed loop of 'trusted data + real-time logistics status + automated settlement.'
