## Abstracts

The global Blood Bank Information System market size is expected to reach \$ 781 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

A Blood Bank Information System (BBIS) is a computerized management system designed to oversee and streamline the entire process of blood collection, storage, testing, and distribution. It enhances efficiency in managing blood resources, ensuring safety and traceability of blood products. The system provides real-time updates on blood inventory, records donor information, test results, and tracks the utilization of blood. This allows hospitals and medical institutions to optimize blood transfusion management, minimize waste, and ensure the safety of patients requiring blood.

The Blood Bank Information System (BBIS) market is primarily driven by the increasing demand for efficient blood management and tracking systems in healthcare. With a rising number of surgical procedures, trauma cases, and the prevalence of chronic diseases, hospitals and healthcare facilities need advanced systems to ensure the availability and proper utilization of blood supplies. Furthermore, advancements in technology such as automation, cloud-based solutions, and AI integration are significantly enhancing the capabilities of BBIS, allowing real-time data access, improved accuracy, and streamlined processes, thereby fueling market growth.

Despite the promising growth, the BBIS market faces several challenges. One of the key issues is the high initial cost associated with implementing these systems, which can be a barrier for smaller hospitals or clinics with limited budgets. Additionally, concerns around data security and privacy remain prevalent, as the sensitive nature of patient and donor information makes the systems vulnerable to cyber-attacks. Ensuring

compliance with stringent regulations, such as HIPAA and GDPR, adds to the complexity of managing and maintaining these systems efficiently.

Global Blood Bank Information System key players include Roper Industries, Haemonetics, Cerner Corporation, McKesson, etc. Global top four manufacturers hold a share over 55%. North America is the largest market, with a share over 45%, followed by Europe, and Asia-Pacific, both have a share over 45 percent. In terms of product, Blood Bank Transfusion Service Module is the largest segment, with a share over 60%. And in terms of application, the largest application is Hospital, followed by Blood Station.
