According to our (Global Info Research) latest study, the global Blood Compatible Polymers market size was valued at USD 1247.6 million in 2023 and is forecast to a readjusted size of USD 3026.1 million by 2030 with a CAGR of 13.5% during review period.

Devices used for blood purification such as haemodialysis, hemofiltration, drug delivery systems using polymers, products from tissue engineering, and bone related problems are some of the areas using synthetic polymeric materials. Polymers that are blood compatible consist of antithrombogenic biomaterial that does not include blood-soluble additives either. Biocompatible polymers are used to interface with biological systems to treat, evaluate, replace, and augment any organ, function, or tissue.

The blood compatible polymers market is driven by the biomedical and pharmaceutical end-use industries. Blood compatible polymers have various advantages over the other biomedical devices. They have been used extensively used over the last two decades. However, blood compatible polymers need to be made at a particular composition of polymers. Several techniques are used to gain desired properties of polymers to make them blood compatible. These techniques need highly skilled workers and adequate laboratory facilities. Hence, lack of skilled workers and laboratory facilities are likely to restrain the global blood compatible polymers market.
