Blood flow restriction bands are devices which are used by the patients who have undergone surgery or any other condition which led to weakened physical strength of limbs to lift the body weight. The use of blood flow restriction bands for is evidence based approach for more benefit to patient with lesser intense physical activity. Blood flow restriction bands limits the blood flow through the veins but at the same time do not affect the blood flow through arteries. The blood flow restriction bands is tied along waist, or leg or arm depending on the part of body being affected more. These bands are often used for the blood flow restriction training to increase strength and size of limbs in the athletes as well as in rehabilitating patients. The training or physical activity with blood flow restriction bands as intense as 60% to 80% is equivalent to physical activity without blood flow restriction bands with same benefits.
