The global BGM devices market is growing due to the increase in the number of people with diabetes, especially type 1 diabetes. To avoid high doses of medication and insulin intake, these people are moving toward monitoring blood glucose levels by learning about the technicalities and the usage of BGM devices.

Scope of the Report:

This report focuses on the Blood Glucose Monitoring Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Global rise in the prevalence and incidence of diabetes and increasing adoption of continuous glucose monitoring (CGM) systems are the key factors propelling the growth of this market. In addition, continuous technological advancements in blood glucose monitoring devices and rapid growth in aging population are further stimulating the demand for blood glucose monitoring devices. However, inadequate reimbursement and high cost associated with the application of CGM systems and product recalls are some of the key factors hampering the growth of this market.

North America and Europe are anticipated to lead the global market on account of their large population plagued with diabetes, the region's rapidly increasing geriatric and obese population, and their high per capita expenditures on healthcare. The Asia Pacific market is expected to rise at a substantial rate during the forecast period ascribed to the populous nations of India and China. The market in Latin America and Middle East & Africa is likely to expand at moderate growth rate over the period of forecast.

The worldwide market for Blood Glucose Monitoring Devices is expected to grow at a

CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
