A blood ketone meter is a device that can detect circulating ketones in the body. Blood ketones refer to the amount of ketone bodies in the blood. Ketone bodies consist of acetone, beta-hydroxybutyrate, and acetoacetate, which are substances produced during the process of breaking down fat tissue and providing energy. Since glucose can normally provide energy for the body in a normal human body, the content of ketone bodies in the blood is very small, and the normal content is 0.03-0.5mmol/L. Blood ketone bodies are an important indicator of human disease response. Under pathological conditions, such as severe diabetes, fat mobilization is strengthened, and excessive ketone body production in the liver exceeds the utilization capacity of ketone

bodies outside the liver, resulting in increased ketone bodies in the blood. for ketosis.
