## Abstracts

Blood and fluid warming devices are medical devices designed for warming fluids, colloid, crystalloids or blood products, prior administration to prevent hypothermia in patients. Hypothermia may cause complications in surgeries such as coma or cardiac arrest and prolong healing time.

Scope of the Report:

This report focuses on the Blood and Fluid Warming Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The demand for blood and fluid warming instruments is fuelled by increased burden of hypothermia cases. The incidences of hypothermia are high in cold countries. For instance, according to Center for Disease Control (CDC), in the U.S. there were around 1,301 annual deaths caused due to hypothermia. The incidence of hypothermia is high in geriatric and infant population. Worldwide a gradual increase in surgical procedures along with aging population is the major factor which is anticipated to fuel growth of the global blood and fluid warmer market during the forecast period. Also, the increasing consumption of abusive drugs, growing incidences of thyroid conditions and diabetes are the other hypothermia causing factors which are expected to boost the demand for blood and fluid warming instruments. Increase in mergers and acquisitions among the major global players is one of the major trend in the global blood and fluid warmer market. However, high research and development expenses in product development and the low awareness about blood and fluid warming instrument treatments in the developing countries is anticipated to hamper growth of the global blood and fluid

warmer market growth.

The worldwide market for Blood and Fluid Warming Devices is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
