The global Blood Products for Feed market size is expected to reach \$ 3694 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

In 2025, global Blood Products for Feed production reached approximately 1.86 million tons, with an average global market price of around US\$1,495 per ton. Blood products for feed refer to products that are made from fresh blood obtained from slaughtering pigs and other livestock and poultry, and processed through a series of processes such as sterilization, separation, and drying. They mainly include three categories: plasma protein powder, hemoglobin powder, and blood meal. .

The global market for Blood Products for Feed maintains a steady development trend, driven by the large-scale and intensive process of global livestock and poultry farming, as well as the growing emphasis on animal growth performance and disease prevention and control in the breeding industry. Raw material supply is highly linked to the global livestock and poultry slaughter industry, forming a stable supply based on the mature by-product recovery system of meat processing, with the regional supply pattern basically matching the distribution of slaughter capacity. The market shows obvious regional differentiation, with North America and Europe as mature markets with complete industry standards and technical systems, and the Asia-Pacific region as the core growth pole driven by growing livestock and poultry consumption demand and upgrading breeding models. Market competition focuses on biosafety control, separation and purification technology and compliance certification capabilities, and high-purity functional products command higher market premiums. Global regulatory systems for animal-derived feed continue to improve, with stricter requirements for epidemic prevention and full-chain traceability management, promoting the industry toward standardization and normalization. The product structure upgrades toward high

value-added directions, with expanding application scenarios for functional segmented products, and circular economy models and clean label trends further guide the long-term development direction of the industry.
