According to our (Global Info Research) latest study, the global Blood Testing market size was valued at USD 475 million in 2023 and is forecast to a readjusted size of USD 540.4 million by 2030 with a CAGR of 1.9% during review period.

A blood test is the analysis of blood sample performed in a laboratory and the blood is usually taken from the vein in the arm through a needle, or through a finger prick to determine patient's health status. Blood tests are very often used in health care to understand biochemical and physiological states, mineral content, pharmaceutical drug effectiveness, organ function, disease and also used in drug tests to detect drug abuse. Multiple tests for specific blood components are often grouped together into one test panel called as blood panel or blood work. The function of organs and how well a treatment is working can be determined by blood culture tests.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
