According to our (Global Info Research) latest study, the global Blood Transfusion Diagnostics market size was valued at USD 3122.6 million in 2023 and is forecast to a readjusted size of USD 4276.1 million by 2030 with a CAGR of 4.6% during review period.

Intravenous transfer of blood or blood products is known as blood transfusion. Replacement of lost blood components can be done with the help of blood transfusion. Blood components like red blood cells, white blood cells, platelets, clotting factors and plasma are mostly transfused. These blood components are of great importance to laboratories and hospitals during an emergency or a critical case of large volume of blood loss. RBC transfusion is done when hemoglobin levels fall below 100g/L. Blood collected from the donor has to be screened for a number of infectious disease before transfusion. Thus, blood transfusion diagnostics play an important role in blood transfusion in order to avoid infection to both the receiver and healthcare staff.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
