## **Abstracts**

Western blot, popularly termed as protein blot, is a widely used technique in proteomics. It enables researchers to study the structure and functions of the underlying proteins, precisely to identify the exact amino acid sequences in proteins. Understanding of cell signaling molecules is one of the many advantages that the western blotting technique offers. Growing investments by government and private research organisations in proteomics and other protein-related studies will remain a key factor bolstering the demand for western blotting in the near future. In terms of revenues, the molecular diagnostics field will continue to contribute a major share to the global western blotting market.

### **Scope of the Report**

This report studies the Blotting Systems market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Blotting Systems market by product type and applications/end industries.

Protein research dynamics will remain a key factor positively influencing the market for western blotting. Growing prevalence of AIDS worldwide is expected to hold a major influence on the western blotting market growth on a global level. Amplifying investments by several leading biotechnology and pharmaceutical companies in proteomics R&D is a key factor primarily driving the market for western blotting technique.

In addition, surging M&A activities among leading companies is also anticipated to flavor the market. The recent past has seen emergence of several advances in the western blotting technique, including automated western blotting and imaging. Moreover, advanced imaging software has also been introduced. These factors will

continue to accelerate the market growth during the forecast period.

North America is poised to account for the largest share of the western blotting market, followed by Europe and Asia-Pacific. However, the Asia-Pacific market is slated to grow at the highest CAGR during the forecast period.
