Abstracts

The blowing agent is a chemical substance that is used in generating a gas to expand rubber, plastics, and ceramics to create foam. Blowing agents are used to impart features such as low weight, heat insulation, sound absorbency, permeability, elasticity, electrical insulation, excellent textures, wood grain, and shock absorbency.

Scope of the Report:

This report focuses on the Blowing Agent in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Hydrofluorocarbons (HFC) is the most-widely used product type of blowing agents. HFCs has currently become a widely accepted blowing agent type as they are eco-friendly since they have low ozone depletion potential (ODP). Also, these are used as a replacement for hydrochlorofluorocarbons (HCFCs) as they are scheduled to phase out by 2030. HCFCs are harmful to the environment and hence are scheduled to phase out. This is driving the manufacturers to use HFCs as a replacement for HCFCs in most of the applications.

Asia-Pacific is the global leader in the blowing agents market, in terms of value, and is expected to continue till 2023. Countries in this region such as China, India, Japan, and South Korea are witnessing significant increase in the use of blowing agents in various end-use industries.

The worldwide market for Blowing Agent is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
