Abstracts

According to our (Global Info Research) latest study, the global Blowing-Filling-Capping market size was valued at US\$ 1358 million in 2025 and is forecast to a readjusted size of US\$ 1827 million by 2032 with a CAGR of 4.4% during review period.

The blow-fill-cap integrated equipment is a high-speed automated packaging system that integrates the three key processes of blowing, filling, and capping into a single system. The equipment typically consists of a pre-formed bottle heating system, stretch blow molding modules, an aseptic or ultra-clean filling system, an automatic capping system, a clean air filtration system (HEPA), a CIP/SIP cleaning and sterilization system, and a servo drive system. This equipment solves the problems of high contamination risk, high energy consumption, large footprint, secondary bottle contamination, complex conveyor chains, and high maintenance costs inherent in traditional decentralized 'blow-convey-fill-cap' production processes, achieving higher efficiency, lower energy consumption, and higher hygiene standards in beverage packaging production. The average price of this product is approximately US\$1.4 million, with approximately 942 units sold globally.
