According to our (Global Info Research) latest study, the global Blue Glass IRCF market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Blue Glass IR Cut Filters are a type of optical filter designed to block infrared (IR) light while allowing visible light to pass through. They are made of blue glass, which has a specific IR-cutting property due to its chemical composition, and are used in various applications such as photography, cinematography, and machine vision. These filters help to reduce the amount of IR light that enters the camera sensor, which can cause color casts and affect image quality. Bypassing IR light also enables better color rendering and more accurate representation of the scene being captured.

The industry trend for Blue Glass IR Cut Filters is one of increasing demand, driven by the growth of digital imaging and machine vision technologies. With the rise of smartphones, action cameras, and drones, as well as the increasing use of machine vision in industrial automation and security systems, the need for high-quality, IR-cutting filters has surged. Moreover, the development of higher-resolution sensors and more advanced optics has led to a greater awareness of the importance of IR filtering in achieving optimal image quality. As a result, the market for Blue Glass IR Cut Filters is expected to continue growing in the coming years.
