Blue Indicating Silica Gel is a silica gel with color-changing properties, mainly used to indicate changes in humidity in the environment. The main component of blue indicator silica gel is silicon dioxide, which has the characteristics of a highly active adsorption material. It is usually blue or light blue glass-like particles, which will change from blue to pink after absorbing moisture, thereby indicating the degree of moisture absorption of the desiccant. With its intuitive humidity indication function, blue indicator silica gel is widely used in the fields of industry, food, medicine, etc., and has become a high-end adsorption desiccant due to its high added value and high technical content.
