Blast Resistant Doors are security doors specifically designed to provide protection in the event of an explosion, with the primary purpose of mitigating the damage caused by blast shock waves to the interior of buildings and personnel. These doors are typically constructed of strong materials, such as steel or other high-strength alloys, and are designed to be highly blast-resistant.

Blast Resistant Doors are commonly used in places where explosion threats need to be protected, such as chemical plants, military facilities, oil and gas processing plants, laboratories and government buildings, to reduce injuries and losses in explosion events. These doors are designed to withstand the pressure of explosion shock waves, thereby mitigating the impact on the building's interior structure and personnel, providing an additional safety barrier to enhance overall security.
