## Abstracts

The global Bluetooth Signal Tester market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Traditional energy meter calibration usually uses manual wiring, which is inefficient. Improper operation can cause device damage and pose safety risks. In order to achieve efficient and reliable batch electric meter error verification, low-power Bluetooth technology is now often used to realize wireless verification of electric energy meters. Through research, the Bluetooth normal mode is abandoned and the Bluetooth special mode is adopted. The Bluetooth module forwards signals from the protocol layer to directly forwarding from the bottom register, which greatly improves the stability of signal forwarding. After many experiments and tests, the stability can reach Below 1?s, it can meet the calibration requirements of all current accuracy levels of energy meters. During inspection, there is no need to connect the photoelectric head on the inspection meter body to the optical pulse interface and electrical pulse interface of the meter to be inspected, which reduces manual participation, improves the error inspection efficiency of batch electricity meters, and will also expand the market size of electric energy meters.

The Bluetooth signal tester is a professional test equipment for Bluetooth communication of electric energy meters. It is an intelligent test equipment that integrates Bluetooth communication performance indicators and Bluetooth communication interconnection functional requirements according to the State Grid's technical requirements for electric energy meters Bluetooth communication.
