According to our (Global Info Research) latest study, the global Bluetooth Temperature and Humidity Sensor market size was valued at US\$ 309 million in 2025 and is forecast to a readjusted size of US\$ 541 million by 2032 with a CAGR of 8.3% during review period.

In 2025, global sales of Bluetooth temperature and humidity sensors reached 25 million units, with an average selling price of \$12 per unit. Bluetooth temperature and humidity sensors are sensors that can measure ambient temperature and humidity in real time and wirelessly connect to smart devices (such as mobile phones, tablets, and PCs) via Bluetooth technology. They are widely used in smart homes, climate monitoring, healthcare, and agricultural environmental monitoring. Their core functions include accurate temperature and humidity data acquisition, low-power design, and wireless transmission, making them particularly suitable for scenarios requiring mobile or remote control. Upstream raw materials mainly include temperature and humidity sensor chips, Bluetooth modules, PCB boards, housing plastics (such as ABS and PC), and sealing components. Downstream suppliers primarily target smart home device manufacturers, meteorological equipment manufacturers, agricultural enterprises, and pharmaceutical warehouse monitoring, with main customers being equipment integrators and electronics manufacturers. Global total production capacity is approximately 30 million units per year, with an average industry gross margin of 35%. With increasing demands for intelligent and environmentally friendly solutions, Bluetooth temperature and humidity sensors will further expand their application scenarios and accelerate their development towards low power consumption, high accuracy, and high integration, possessing broad market prospects.
