According to our (Global Info Research) latest study, the global Bluetooth Water Level Logger market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A Bluetooth water level logger is a device used for measuring and monitoring water levels in various applications, such as wells, rivers, lakes, reservoirs, and groundwater systems. It combines the functionality of a water level sensor or transducer with Bluetooth technology for wireless communication and data retrieval.

The device typically consists of a water level sensor or transducer that is submersible or installed at a specific location where water levels need to be measured. The sensor measures the distance from its reference point to the water surface and converts this distance into a water level reading.

The Bluetooth capability allows the water level data to be wirelessly transmitted to a compatible smartphone, tablet, or computer. Users can connect to the logger via Bluetooth and retrieve real-time data, configure settings, and manage the logger remotely using custom mobile applications or software provided by the manufacturer.
