According to our (Global Info Research) latest study, the global Board-Integrated Remote Management Module (BIRMM) market size was valued at US\$ 422 million in 2025 and is forecast to a readjusted size of US\$ 900 million by 2032 with a CAGR of 11.4% during review period.

A Board-Integrated Remote Management Module (BIRMM) is a hardware and firmware system integrated directly into a server motherboard that enables remote monitoring, management, and maintenance of the server. It typically provides an independent network interface, allowing administrators to perform remote power on/off, reboot, firmware updates, hardware health monitoring, and log access even when the operating system is down or the server is unresponsive. Unlike standalone remote management cards, BIRMM is built into the motherboard, offering a compact, cost-efficient solution suitable for small-form-factor servers or deployments where additional expansion cards are undesirable. In 2025, global board-integrated remote management module production reached approximately 15.79 M units, with an average global market price of around US\$26 per unit. Annual production capacity is 16 M units. Gross Profit Margin: 25%. The board-integrated remote management module industry chain is well-structured and closely linked across upstream, midstream, and downstream sectors. Upstream mainly involves semiconductor manufacturing and firmware development, including BMC silicon suppliers like Aspeed and Nuvoton. Midstream comprises server OEMs and ODMs who integrate these modules into rack, tower, and blade servers, including major players such as HPE, Dell, Lenovo, and Huawei. Downstream consists of enterprise data centers, cloud providers, and edge computing infrastructure users, where the modules enable remote monitoring, power management, and secure out-of-band control. Board-integrated remote management modules are essential enablers for

modern server operations, especially as cloud and AI workloads scale. Their value lies not just in hardware integration but in the combination of reliable firmware, security, and seamless interoperability with server management platforms. Looking forward, I see increasing demand for higher security standards, Redfish adoption, and edge server deployments, which will drive both volume growth and further innovation in integrated management solutions.
