According to our (Global Info Research) latest study, the global Board Terminal Block market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A board terminal block is a component designed for installation on a printed circuit board (PCB) and for electrical connection to other boards or components via wires or cables.

There are various methods to connect a board terminal block to wires and cables. For example, some types use screws to fasten wires via crimp terminals attached to the wire ends. Others incorporate a spring in each terminal of the block, allowing wires to be fastened by inserting them while pressing down on specific parts of the terminal.

In both types, soldering to connect wires or cables to the board terminal block is not necessary, enabling use by individuals without soldering expertise.
