Abstracts

Board-to-board (BTB) connectors are used to connect printed circuit boards (PCB), electronic components that contain a conductive pattern printed on the surface of the insulating base in an accurate and repeatable manner. Each terminal on a BTB connector is connected to a PCB. A BTB connector includes housing and a specific number of terminals. The terminal is made from a conductive material (mostly copper alloy), and plated to improve conductivity and antirust. Terminals transmit the current/signal between PCBs connected by BTB; the housing is made of insulating material (mostly plastic).

There are two types of board-to-board connectors: 'rigid/fixed' and 'floating'. The connection between 'rigid/fixed' connectors is fixed. This report focus on Board-to-board (BtoB) Fixed Connectors market.
