Abstracts

The global Board-to-Board Connectors market size is expected to reach \$ 5752 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

Board-to-board (BTB) connectors are used to connect printed circuit boards (PCB), electronic components that contain a conductive pattern printed on the surface of the insulating base in an accurate and repeatable manner. Each terminal on a BTB connector is connected to a PCB. A BTB connector includes housing and a specific number of terminals. The terminal is made from a conductive material (mostly copper alloy), and plated to improve conductivity and antirust. Terminals transmit the current/signal between PCBs connected by BTB; the housing is made of insulating material (mostly plastic).

TE Connectivity and Amphenol are the top 2 players of Board-to-Board Connectors, with about 30% market shares.
