Abstracts

According to our (Global Info Research) latest study, the global Boat Batteries market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Boat batteries help a boat getting started or stay in continuous motion by supplying the required power. Unlike other batteries, such as a car battery, boat batteries contain thick plates and hence, generate less cranking power and maximum reserve capacity. The intriguing part is that a boat battery with highest power capacity is of the same size as a boat battery with lowest power capacity. Additionally, there are some batteries which are even thicker than a typical boat battery and are referred to as hybrid boat batteries or deep-cycle boat batteries.

Growth in tourism and rising disposable income, growing promotional tourist sports activities and rising waterborne tourism are some of the factors which will contribute to the growth of Boat Batteries market in near future. Also, higher consumer confidence, high-tech features and advanced technology are some of the major driving factors for the market of boat batteries. Another primary factor responsible for driving the Boat Batteries market is the growth witnessed in maritime transport or seaborne trade wherein large volume of goods are taken to the sea for transportation purposes.
