The main function of the seal is to prevent the leakage of fluids such as oil, water, and gas inside the ship engine. During the operation of the ship, the pressure inside the engine is high. If there are no effective sealing measures, these fluids may leak into the external environment, which will not only cause waste of resources, but also cause environmental pollution and even cause safety accidents. During the operation of the ship, it is necessary to regularly check the working status of the seal, such as whether there is leakage, wear, etc. If the seal is found to be damaged, it needs to be replaced in time. At the same time, it is necessary to pay attention to the maintenance and maintenance of the engine to keep the engine clean and in good working condition to reduce the wear and damage of the seal.
