A boat reverse osmosis watermaker is an appliance installed on marine vessels for the production of freshwater by removing salts, minerals, and other impurities from seawater. It operates on the principle of reverse osmosis, a process that forces water through a semi-permeable membrane, blocking salt and contaminants and yielding freshwater. This system is crucial for long-distance sailors, cruisers, and commercial vessels where freshwater resources are limited. It typically includes components like a water intake, a pre-filter, a reverse osmosis membrane, a post-filter, and a storage tank for the filtered water.
