According to our (Global Info Research) latest study, the global Boiler Circulation Pump market size was valued at US\$ 322 million in 2025 and is forecast to a readjusted size of US\$ 465 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global boiler circulation pump production reached approximately 1044 k units, the average price is 300 usd/unit. The boiler circulation pump is the core power component of wall-mounted boiler heating system. Its main function is to continuously promote the circulation of hot water in a closed heating pipeline system, and efficiently and uniformly deliver the heat generated by the wall-mounted boiler to each heat dissipation end (such as radiator and floor heating pipe), so as to realize the heating of the whole building.

The gross profit margin of boiler circulation pump is about 26%.

Downstream consumption of wall-hung boiler pumps is distributed as follows: industrial (28%), commercial (40%), residential (32%).
