Volume Booster is designed to meet conventional and high speed control valve applications. It produces a volume boosting action and contains an integral stabilizing by-pass valve, adjustable by a screw. Opening this valve it is possible to improve the stability of the system composed by positioner - volume booster - actuator.

Volume boosters are used together with positioners to increase the positioning speeds of pneumatic actuators. They influence the process to vent or fill the actuator with air, which causes the control valve to open or close more quickly..

According to our (Global Info Research) latest study, the global Valve Pneumatic Volume Boosters market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
