According to our (Global Info Research) latest study, the global Boiler Economisers market size was valued at US\$ 1405 million in 2024 and is forecast to a readjusted size of USD 1966 million by 2031 with a CAGR of 5.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A boiler economizer is a heat exchanger that is installed on the stack of a boiler. It is designed to recover heat that would otherwise be wasted. The economizer transfers heat from the flue gases to the boiler feedwater, which helps to preheat the water before it enters the boiler. This reduces the amount of fuel that is needed to heat the water, which can save energy and money.
