The global Boiler Repair and Maintenance Services market size is expected to reach \$ 3945 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Boiler repair and maintenance services are a systematic and specialized technical undertaking aimed at ensuring the safe, stable, efficient, and compliant operation of boiler equipment and its auxiliary systems through regular inspections, maintenance, repairs, and upgrades. Its core components include daily inspections to eliminate leaks, preventative periodic maintenance, emergency troubleshooting and repairs, and regular internal inspections and comprehensive overhauls conducted in accordance with regulations. This service focuses not only on the boiler itself but also on the health of the entire thermal system, aiming to prevent accidents, extend equipment life, improve energy efficiency, and meet mandatory safety and environmental emission requirements for specialized equipment.

The global industrial boiler maintenance market outlook remains robust and positive. The core growth drivers are the aging of global industrial infrastructure, increasingly stringent environmental and safety regulations, and higher demands from various industries for boiler energy efficiency to improve operational efficiency and reduce fuel costs. Future trends will prominently feature the intelligent transformation of maintenance strategies, moving from traditional 'reactive maintenance' to predictive maintenance based on Internet of Things (IoT) sensors and Artificial Intelligence (AI) analytics. This allows for real-time monitoring and data analysis to provide early warnings of faults, significantly reducing unplanned downtime. Furthermore, the Asia-Pacific region will become the largest regional market due to rapid industrialization and urbanization.
